EDUCATION

- Dhirubhai Ambani University** Gandhinagar, Gujarat, India
Bachelor of Technology - Information Communication and Technology *Expected - 2028*
 - Courses:** Operating Systems, Data Structures, Analysis Of Algorithms, Database Management Systems, Computer Networking

SKILLS SUMMARY

- Languages:** C/C++, Python, JavaScript/TypeScript, Go
- Frameworks & Libraries:** React, Next.js, Node.js, Express.js, FastAPI, Flask
- A.I & M.L:** HuggingFace Transformers, Langchain, LlamaIndex
- DevOps & Tools:** Git, GitHub Actions, CI/CD, Docker, Kubernetes
- Databases:** PostgreSQL, MySQL, MongoDB, Supabase

EXPERIENCE

- Datacurve.ai (Y-Combinator Backed)** Remote
Core Code Reviewer & OSS Developer *Jan 2026 – Present*
 - Code review & evaluation:** Reviewed open-source code submissions using a structured evaluation rubric to ensure correctness, performance, and maintainability.
 - Multi-language assessment:** Evaluated solutions written in Python, TypeScript, and Go across diverse problem domains.
 - Containerized testing:** Designed and built Docker environments to run, test, and validate user-submitted solutions reliably at scale.
 - Problem design:** Created GitHub-based coding challenges and well-defined technical problem statements to benchmark developer performance.
 - Reference solutions:** Developed optimized reference implementations emphasizing performance, scalability, and clean architecture.
- Superr.AI** Remote
Product Engineer Intern *Aug 2025 – Oct 2025*
 - Full-stack performance:** Engineered full-stack applications integrating Next.js with Go inference backends, reducing API latency by 25%.
 - Data pipelines:** Built and orchestrated Python data pipelines on AWS, enabling seamless data flow and scalable processing.
 - Microservices & CI/CD:** Deployed containerized microservices with Docker, improving CI/CD reliability and reducing build failures by 15%.
 - Next.js platforms:** Developed full-scale web platforms in Next.js, accelerating frontend delivery by 30% through optimized SSR/CSR component architecture.

PROJECTS

- Arcturus (Python, Scapy, PyShark, python-nmap):** GitHub
Built a Python network probing & client-discovery tool that detects Wi-Fi (including hidden SSIDs) and wired networks, identifies active clients via passive/active scanning, and visualizes network topology with graph-based mapping; summarizes device activity via DNS, HTTP host headers, and TLS SNI metadata. Added host stealth mode and network access-control features for security testing.
- Code-Clock (Go, gRPC, CLI, YAML):** GitHub
Built a Go-based codebase analysis and optimization tool that scans large repositories to identify performance bottlenecks, redundant code paths, and structural inefficiencies. Designed a modular CLI with YAML-driven configuration and a gRPC-based service architecture for scalable analysis pipelines. Leveraged concurrency with goroutines and worker pools to process repositories in parallel, improving analysis speed and enabling actionable optimization insights for developers.

ACHIEVEMENTS

- Poster Presentation:** Presented a poster of our Dyslexia Detector App at IIM Ahmedabad Conference on Tech for Disabled Persons (CTDP 2025); recognized among top AI accessibility projects.
- Invited Speaker:** Invited speaker at India Management Research Conference (IMRC 2025) at IIM Ahmedabad to present a research abstract on AI modeling in Perishable Agricultural Commodities.

POSITION OF RESPONSIBILITY AND VOLUNTEERING

- Google Developer Groups (GDG) On Campus** *2026 – 2027*
Technical Lead & Software Developer
 - Technical leadership:** Hosted workshops on web development, and DevOps; mentored students on Git/GitHub and open-source collaboration.
 - Campus software development:** Built full-stack tools for the student body government, improving internal processes and student services.
